New in Photoshop for 2021 is Smart Align, a new feature that takes advantage of AI to detect and align objects in your image, no matter how they're placed. Today, this is one of the most tedious tasks in photo editing, but it's made easier by the fact that Smart Align actually works. Other helpful changes include the ability to change the direction of people's gaze with just a click, new one-click options for adding text and adding notes, as well as more granular attention to details like red eye peepers. This month, Photoshop also lets you take advantage of 10 new editing tools to transform your images with lightning-fast results. Wrangle tools give you the ability to control the effect your photo will have with the most popular adjustment tools. You can turn off the background, erase elements or make a series of small edits into one seamless adjustment. There are also some new lens, blur, mask and other tools that also make quick work of any photo, but the option to use all of your creative tools is a bit daunting. The update to Photoshop for Windows and Mac also lets you conveniently collaborate on a project without leaving the app. You can quickly send images to a shared folder and work on them collaboratively in real time. You

can also comment on images and comments will sync across both PCs and Macs. The big difference between this update and previous one is that you'll work in a familiar pocket-sized OS (it's Windows 10) and easily resize the canvases you work on. The smaller canvas gives you a lot of canvas space and you can even resize the window to fill the monitor—an option not available in previous versions of Windows.
