It may not have a great deal of camera-specific features, but Photoshop CC nonetheless establishes a level of performance and ease-of-use that rivals every other photo editing program on the market. It's good, although I'll admit to some minor frustration with the interface. There was a lot of work that went into making sure the app behaved the way DuckDuckGo has it behave on the desktop, and some of the results are impressive and yet frustrating. For example, the previous record for a download was 34,000. On mobile, there was a good chance that my last image would close the Photoshop app. Neither of us would be happy with that. I can't spot a way of communicating this to the app, and that would provide a very useful feedback loop in Photoshop. After you've optimized the RAW photo, you can then apply Photoshop forms of most image editing, such as adjustment layers, image blur, and color, and create custom masks, layers, and selections. Elements 3 also has an automated color replacement tool that lets you easily replace skin tones with people and things, make new copies of the photo, and create easy-to-use color replacement swatches. Color is a big deal in other image editing software, but it's still not as important in Elements as it is in Photoshop CS. That doesn't mean Photoshop has no use in the enterprise. A Web application with a robust publishing tool like InDesign could significantly change the sales and marketing plans of BIG Enterprise and SMB Marketplaces.
